Site Preparation for Dye Test

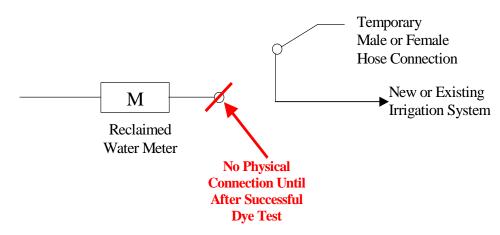

NOTE: Do not connect your irrigation system to the reclaimed water meter until you have authorization from a backflow prevention inspector.

Prior to Scheduling a Dye Test

- 1. An approved Reduced Pressure (RP) Backflow Prevention Assembly must be installed on the **potable water service** in accordance with Tucson Water Standard Detail #1802 (reverse side).
- 2. The assembly must be tested by a certified tester and the test results must be submitted to the Tucson Water Backflow Prevention Section. The assembly must then pass a final inspection by a Tucson Water Backflow Prevention Inspector.
- 3. A tee or strainer must be installed on the supply side of the assembly with a ½" or ¾" female pipe thread with plug. A temporary hose bib shall be installed for use in the initial dye test only. See Figure below.

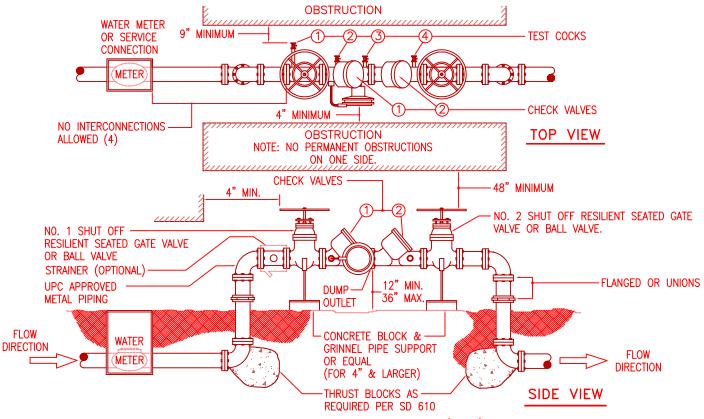

- 4. The reclaimed water meter is installed, locked, and is to remain locked.
- 5. A temporary male or female hose connection shall be installed on the irrigation system for the dye testing process. See Figure below.

Dve Test

- 1. The customer or the customer's representative must be on site during the dye test.
- 2. After the dye test is complete, the temporary hose connection on the irrigation system and the hose bib on the backflow prevention assembly must be removed.
- When the site is in full compliance, a Backflow Prevention Inspector will unlock the reclaimed water service.

For additional information, contact the Backflow Prevention Section at (520) 791-2650

SD 1802 - REDUCED PRESSURE ASSEMBLY (RPA) INSTALLATION
These specifications are to be followed for all water service
protection installations utilizing a RPA.

- 1. A permit is required before installing or replacing a backflow assembly. Permits shall be obtained at Tucson Water, 310 W. Alameda.
- 2. A listing of approved backflow assemblies is available from Tucson Water.
- 3. The RPA shall be installed outside, above ground, as close to the water meter as possible and on private property unless otherwise authorized. (Right-of-ways are not private property.)
- 4. There shall be no other piping connected to the piping between the meter and the backflow assembly except for parallel assembly installations.
- 5. Installations shall meet current uniform plumbing codes in addition to Tucson Water's Standard Details.
- 6. Installations shall be left exposed until inspected and approved by Tucson Water.
- 7. Protective cages are optional, and will meet clearance, access and drainage requirements.
- 8. It is recommended that backflow assemblies be protected from the elements. Care shall be taken to ensure that the protection does not hinder operation of the assembly. Before installing a backflow assembly on any fire system, consult with the fire
- 9. authority for additional requirements.
- 10. The installation of a backflow assembly may create a closed system. Consult local plumbing codes for pressure relief valve and thermal expansion requirements.
- 11. For additional information contact the Backflow Prevention Section at (520) 791-2650.
